

PERSPECTIVĂ PSIHOCOLOGICĂ ÎN STUDIUL ÎNVĂȚĂRII
A PSYCHOECOLOGICAL PERSPECTIVE IN THE STUDY OF
LEARNING

Grigore Nicola*

Abstract

Recent analysis of Psycho-history shows global effects of a new revolution in human thinking, the third after the moments of Copernic (1543) and Darwin (1859). "The new ecological paradigm" (Dunlop and Van Riere, 1978) dethrones the man from his statute of nature dominator (through knowledge and techniques), showing him the beneficial of being a humble partner.

Keywords: learning, historical review, psychoecological modern perspective
