#### *Abstract*

*Schools are among the safest places for children to be. However, recent events of violence in schools around the world make educators and parents concerned about their children's safety. Recent school violence in Finland has increased the concern for conducting a more comprehensive approach to investigating threats of violence. The student posted his threat to the Internet and then carried them out. Could this situation have been prevented using school safety analysis? Research would support that a comprehensive school safety analysis can help prevent such occurrences.*

*Keywords: safety analysis, school violence, child safety*
